Profile

Applied AI engineer who works with business teams to automate their work with AI, from the first idea to a solution in daily use. I build agent-first: I write the specifications, make the architecture decisions and review every change. M.Sc. Applied Artificial Intelligence (Feb 2027).

Technical Skills

AI & LLMs	LLM integration, RAG, agentic workflows, evaluation, AI coding agents (Claude Code), PyTorch, Scikit-learn, computer vision
Engineering	Python, C#, TypeScript, FastAPI, Django, REST APIs, Docker, CI/CD, testing, SQL/Postgres, Git, Linux
Data & Retrieval	pgvector, Qdrant, llama.cpp (local inference), data migration pipelines
Languages	German (native), English (fluent)

Professional Experience

AI Engineer – Vision & Engineering Automation (Intern & Master's Thesis) Sep 2026 – Feb 2027
3con Technologies GmbH Ebbs, Austria

- Work with the **design and engineering teams** to automate parts of their daily work, from choosing the use case to integrating it into the company's systems; the first automations are in daily use.
- Built a **vision inspection system** that went from concept to a **customer deployment** in Oct 2026 and is set up from a few reference images, without training.
- Chose a simple, pretrained model over a deep learning detector that was **too slow for the plant's hardware**; the simpler model was also more accurate.
- Work **agent-first**: I write specifications and architecture, AI coding agents implement, and I review and test every change against real data.

Founder & AI Engineer Oct 2025 – Present
ARSoftware UG Landshut, Germany

- Built **replai** for a German client, running entirely on their own servers: a migration of 15 years of CRM history, a self-hosted LLM chat in use by their staff, and an email assistant where a person approves every reply. andreaigner.link/projects/replai
- Set up and run the full stack myself as containerised services, including single sign-on and central logging.

Working Student – IT Consulting Mar 2023 – Aug 2025
intellior GmbH Stuttgart, Germany

- Automated software version migrations for major German enterprises with **5+ Python microservices** built on the platform's REST API, reducing internal effort per migration from **2–12 weeks to 4–8 hours** and the client's data freeze to **1–3 days**.
- Built a Python client for the Aeneis platform, enabling one of Germany's largest business groups to feed process data into an internal **LLM chatbot system**. andreaigner.link/projects/aen-client

Intern – Production Technologies Apr 2022 – Nov 2022
BMW Group Dingolfing, Germany
Innovation project with **Intel, NTT Data, Microsoft and Ubisense**; Python automation that saved several hours of manual work per week.

Project

AgentWatch andreaigner.link/projects/agentwatch
macOS menu bar app that monitors Claude Code and Codex agent sessions with live tokens, cost and quota. Signed and notarised release with automated updates.
Tech: Swift, SwiftUI, AppKit, Sparkle, GitHub Actions

Education

M.Sc. Applied Artificial Intelligence Oct 2025 – Feb 2027 (expected)
TH Rosenheim Rosenheim, Germany
Thesis: *Development and Validation of a Configurable Vision System for Industrial Visual Inspection*

B.Sc. Computer Science Mar 2023 – Sep 2025
OTH Regensburg Regensburg, Germany
Previously Computer Science studies at University of Applied Sciences Landshut (Sep 2019 – Mar 2023).

Leadership & Interests

- **Tennis:** team captain of a club team for 2+ years and coach of a women's team; children's coaching during school holidays at the tennis school of former ATP pro Daniel Brands, Munich.
- **President of the Student Council**, University of Applied Sciences Landshut (one year).
