

Andre Aigner

Landshut / Munich area, Germany

M +49 174 6131721 • **E** andreaigner@icloud.com • **W** andreaigner.link
linkedin.com/in/andre-aigner github.com/a-aigner

Skills

Programming: Python, JavaScript/TypeScript, C#, Java, Swift, SQL

Frameworks: Flutter, Spring Boot, FastAPI, Selenium, Supabase

AI & Data: RAG pipelines, vector databases, local LLM inference, Scikit-learn

DevOps & Tools: Docker, Git, Linux, REST APIs

Focus Areas: Software Development, Microservices, Test Automation, Machine Learning, LLM Integration

Work Experience

ARSoftware UG

Founder

Landshut, Germany

Oct 2025 - Present

- Designing and delivering a **GDPR-compliant AI system** for a mid-sized German company: RAG pipelines over internal knowledge and project data that auto-draft personalized service email responses, plus an internal LLM chatbot that keeps confidential data out of public AI tools.
- Released 5 iOS/macOS applications, reaching over **3k downloads** across the portfolio.
- Handling the full cycle solo: architecture, implementation, release management, and client acquisition.

intellior GmbH

Software Developer & IT Consultant

Part-time alongside studies

Stuttgart, Germany

Mar 2023 - Aug 2025

- Replaced a manual, consultant-driven schema migration process with a suite of **7 internal tools** (drag-and-drop attribute mapping, configurable category handling, auto-generated migration scripts), reducing typical customer migrations from **several weeks to under half a day**.
- Built the tooling in Python against the product's REST API; generated scripts executed directly against customer databases reducing the data freeze to one business day.
- Collaborated with consulting partners and German banks on enterprise software integration and runtime optimization.

BMW Group

Intern, Production Technologies

Dingolfing, Germany

Apr 2022 - Nov 2022

- Coordinated Use Cases in an innovation project with **Intel, NTT Data, Microsoft, and Ubisense**.
- Built Python automation scripts reducing manual process effort by **several hours per week** using Tesseract OCR.
- Improved team workflows and supported data-driven production improvements.

TRIO Project I

Software Developer (part-time)

Landshut, Germany

Mar 2021 - Mar 2022

- Developed a generic Selenium automation bot in C# for large-scale UI testing.

Education

TH Rosenheim

M.Sc. Applied Artificial Intelligence

Rosenheim, Germany

Oct 2025 - Expected 2027

- Master's thesis written in industry at **3CON Technologies**, Ebbs, Austria (Sep 2026 - Feb 2027).

OTH Regensburg

B.Sc. Computer Science

Regensburg, Germany

Sep 2019 - Sep 2025

- Began studies at University of Applied Sciences Landshut (2019-2023), then transferred to OTH Regensburg for a stronger technical focus.
- Worked in parallel as a software developer and IT consultant throughout the degree.
- Served one year as **President of the Student Council**.

Languages

German: Native

English: Fluent (C1), primary working language in professional and academic settings

Projects

notemd: macOS/iOS knowledge base built around an on-device model runtime; shipped commercially with a paid premium tier.

- Integrated `llama.cpp` into the app to run quantized Gemma 4 models fully locally with Metal acceleration. Ships multiple selectable model sizes so users can match the model to the unified memory available on their Apple Silicon chip; the runtime handles model download, load/unload and memory pressure so inference stays viable alongside the editor.
- Native PDF ingestion via a PP-DocLayout-M ONNX layout detector (optional Core ML delegation), producing structured Markdown with cropped figure, chart and table assets and a JSON block manifest --- replacing a Python MinerU dependency with a self-contained Swift binary that's a fraction of the size.
- Agentic workflows chain local model calls across the vault for retrieval, link and structure generation and multi-step note edits, rather than exposing a single chat box.
- Local-first by architecture: notes stay as plain Markdown files on disk, with no inference server, no sync backend and no user content leaving the device.

Tech: Swift, llama.cpp, Gemma 4 (quantized GGUF), ONNX Runtime, Core ML / Metal

Website: <https://notemd.org> Extraction pipeline: <https://github.com/a-aigner/MinerUNativeExtract>

Aeneis Python API Wrapper: Python client library for Aeneis (intellior GmbH), enabling one of Germany's largest business groups to integrate business-process data into an internal **AI/LLM chatbot system**.

Tech: Python, REST APIs, OAuth2
